Consigli di Posa

Consigli di Posa per la posa di mattonelle e piastrelle in cemento e ceramica

1) NON SI ACCETTANO CONTESTAZIONI PER MATERIALE POSATO
2) CONTROLLARE TONO, CALIBRO, SCELTA E PLANARITA' PRIMA DELLA POSA DEL MATERIALE
3) LE MACCHINE ELETTRONICHE CHE STABILISCONO IL CALIBRO SONO TARATE CON UNA TOLLERANZA DI 1,2 MM
4) IL MATERIALE DEVE ESSERE POSATO CON UN MINIMO DI FUGA DI 3 MM. IL MATERIALE RETTIFICATO DEVE ESSERE POSATO CON UNA FUGA MINIMA DI 2 MM.

Le serie Campigiane devono essere posate con una fuga di 5 mm.

Consigli di Posa per la posa di mattonelle e piastrelle in cemento e ceramica

In preparazione della posa, si raccomanda di controllare il tono, il calibro e la scelta. Il nostro materiale è deliberatamente prodotto e scelto con leggere differenze di tonalità che esaltano gli effetti delle grafiche e dei colori. E inoltre necessario utilizzare durante la posa, piastrelle prelevate da scatole diverse. L'utilizzo di materiale diverso da quello ordinato o difettoso significa l'accettazione delle caratteristiche qualitative ed esclude contestazioni. Contestazioni sul materiale già posato non sono accettate.

Consigli per la posa di tutti i formati rettangolari a catalogo

Di seguito indichiamo alcuni consigli per valorizzare le caratteristiche del prodotto in fase di posa. Un accorgimento basilare per la posa del nostro prodotto è quello di alternare con cura le differenti tonalità prelevando le piastrelle a gruppi di 3-4 pezzi per volta da almeno cinque scatole diverse. Distribuire in modo armonioso le diverse nuances di colore che si evidenziano e controllare il risultato di tanto in tanto, osservando da opportuna distanza una porzione di lavoro eseguita.

Posa materiali rettificati

Per la posa dei materiali rettificati è comunque sempre indispensabile manteere una fuga minima di 2/3 mm. Da una piastrella all'altra usufruendo di stucchi e sigillanti di colore coordinato a quello del materiale. Nella posa dei materiali rettificati rettangolari, è importante evitare di far collimare i vertici di una piastrella con la metà delle altre, al fine di sopperire alle eventuali imperfezioni di planarità presenti comunque in tutti i grandi formati. Trattandosi di materiale tagliato e rettificato, per evitare questo problema, è consigliabile posare il materiale a corere, con intervallo da 0 a 15 cm. E' fortemente auspicabile affidare la posa a personale esperto che, dopo aver verificato la corretta planarità della caldana e la qualità del materiale, contribuirà alla impeccabile esecuzione dell'incarico.

Lavaggio dopo posa

Il lavaggio dopo posa è una fase di fondamentale importanza per tutti gli interventi successivi per la manutenzione.
Con il lavaggio dopo posa:
- Si eliminano i residui di posa (malta, colla, vernice, sporco da cantiere di varia natura).
- Si rimuovono eventuali residui superficiali del materiale.

È bene sapere che oltre il 90% delle contestazioni in cantiere è dovuto ad un cattivo, o addirittura inesistente, lavaggio dopo posa.

Reflusso delle acque su pose sopraelevate:

Si consiglia di dare una pendenza al pavimento con una percentuale non inferiore all' 1%.

Si consiglia l'uso di Clip metalliche da inserire tra ogni singola lastra per rompere la tensione superficiale dell'acqua in caso di ristagni, migliorandone il reflusso.

Consigli di Posa per la posa di mattonelle e piastrelle in cemento e ceramica

1) NO CLAIMS WILL BE ACCEPTED FOR LAID MATERIALS
2) CHECK THE SHADE, WORKSIZE, SELECTION AND THE WARPAGE BEFORE LAYING THE MATERIAL
3) ELECTRONIC MACHINES THAT SET THE WORKSIZE ARE CALIBRATED WITH A TOLERANCE OF 1.2 MM
4) THE MATERIAL MUST BE LAID WITH A MINIMUM JOINT OF 3 MM. THE RECTIFIED MATERIAL MUST BE LAID WITH A MINIMUM JOINT OF 2 MM.
The Campigiane series (thin paving bricks) must be laid with a joint of 5 mm.

Consigli di Posa per la posa di mattonelle e piastrelle in cemento e ceramica

When setting the tiles, pls chec tone, caliber and choice. Our material is deliberately produced and chosen with slight differences in shade which underline the colour effect it is absolutely necessary to use tiles from different boxes when installing. The use of material different from the order or defective means acceptance of the quality characteristics of the goods and excludes complaints. Complaints about material already installed will not be accepted.

Installation suggestions for all rectangular formats in the catalogue

You will find a few suggestions for making the most of the product at the installation stage. A basic strategy to adopt when laying our product is to carefully alternate the different shades taking the tiles three or four at a time from at least five different boxes. Harmoniously distribute the various shades that are most striking and check the result from time to time, surveying the section of work done, from a suitable distance. The materials should be checked before installation and put aside if they are defective because no compliants will be accepted that have already been installed.

Installation of rectified materials

For the installation of rectified materials it is anyway essential to keep a gap between the tiles of at least 2/3 mm. Using grouts and sealers that are colour co-ordinated with the material. When laying rectangular rectified material, it is important to avoid placing the edges of each tile next to the halves of others in order to compensate for any imperfections in flatness that are, however, always present in large sizes. As this is cut and rectified material to avoid the problem it is recommended to lay the material in a straightforward design with an interval from 0 to 15 cm. Between each tile as per the pattern shown below. It is highly suggested to have the installation done by qualified experts who, after checking the proper flatness of the concrete slab and the quality of the material, will contribute to carrying out of the job flawlessly.

Washing after installation

Washing after installation is a very important, fundamental phase for all later interventions and for the maintenance. The following is achieved by washing after the installation:
- Remove installation residue (mortar, adhesive, paint and various types of dirt in general).
- Remove any residue from the surface of the material.

It's an important fact to know that over 90% of claims in building sites are due to a bad washing procedure or even due to the lack of washing after installation.

Water runoff on raised floors:

We recommend you give the floor a slight slope (at least 1%).

We recommend you use metal clips to fasten each slab in order to break the surface tension of the water in the event of pooling, thereby aiding runoff.

We recommend that you always use a central support for every floor tile laid.

Consigli di Posa per la posa di mattonelle e piastrelle in cemento e ceramica

1) AUCUNE RÉCLAMATION NE SERA PRISE EN COMPTE EN CAS DE MATERIELLE POSÉ;
2) CONTRÔLER LA NUANCE, LE CALIBRE, LE CHOIX ET LA PLANÉITÉ AVANT DE POSER LE MATERIELLE;
3) LES MACHINES ÉLECTRONIQUES UTILISÉES POUR DÉTERMINER LE CALIBRE PRÉSENTENT UNE TOLÉRANCE DE CALIBRAGE DE 1,2 MM;
4) LE MATERIELLE DOIT ÊTRE POSÉ AVEC UN JOINT DE 3 MM MINIMUM.
LE MATERIELLE RECTIFIÉ DOIT ÊTRE POSÉ AVEC UN JOINT DE 2 MM MINIMUM.
Les séries Campigiane doivent être posées avec un joint de 5 mm.

Consigli di Posa per la posa di mattonelle e piastrelle in cemento e ceramica

Avant la pose, nous vous prions de bien vouloir vérifier les critères suivants: tonalite, calibre et choix. Le dénouançage est une caractéristique qui exalte les colories et les graphismes du matériel. Il est conseillé aussi, pendant la mise en œuvre du matériel, de prélever les carreaux de plusieurs boîtes. L'utilisation du matériel qui ne correspond pas au matériel commandé et/ ou défectueux donne lieu automatiquement à l'acceptation du produit posé et exclus toute contestation.

Consails pour la pose de tous les formats rectangulaires présentés sur le catalogue

Vous trouverez ci-après quelques conseils grâce auxquels vous pourrez mettre en valeur les caractéristiques du produit au moment de sa pose. L'un des conseils de base pour poser notre produit est de prendre les carreaux par groupes de 3 ou 4 d'au moins cinq boîtes différentes, de manière à alterner les tonalités. Répartissez harmonieusement les nuances de couleurs que vous remarquerez et contrôlez le résultat de temps à autre en regardant de loin la portion de travail déjà exécutée.

Pose des matériaux rectifiés

Pour poser les matériaux rectifiés, il est toujours indispensable de garder un joint minimum de 2/3 mm entre deux carreaux, en appliquant des produits de remplissage des joints et des produits de scellement d'une teinte assortie à celle du matériau. Au cours de la pose des matériels rectifiés rectangulaires, il est important d'éviter de faire coïncider les angles d'un carreau avec la moitié des autres, afin de faire face aux éventuelles imperfections de planéité qui, d'une manière ou d'une autre existent toujours dans les grands formats. Etant donné qu'il s'agit de matérielle coupé et rectifié, pour éviter ce problème, il est préconisé de poser le matériau en alignement continu, avec un intervalle de 0 à 15 cm. Il est vivement recommandé de confier la pose aux soins d'un carreleur compétent qui, après avoir vérifié si la planéité de la sous-couche isolante est correcte et jugé de la qualité du matérielle, contribuera, par son expérience, à une exécution impeccable.

Nettoyage après pose

Le nettoyage après pose est une étape d'une importance fondamentale pour toutes les interventions suivantes et pour l'entretien. Avec le nettoyage après pose:
- Vous enlevez les résidus de pose (mortier, colle, peinture, saleté de fin de chantier de diverses natures);
- Vous débarrassez le matériau des éventuels résidus de surface.

Il convient de souligner que plus de 90% des réclamations sur chantier sont dues à un nettoyage après pose mal effectué, voire même pas du tout effectué.

Reflux des eaux sur poses surélevées :

On conseille de prévoir une inclinaison minimale du carrelage de 1%.

On conseille d'utiliser des Clips métalliques à insérer entre chaque dalle pour rompre la tension de surface de l'eau en cas de stagnations, en en améliorant le reflux.

On recommande de toujours utiliser un support central pour chaque carreau du revêtement de sol.

Consigli di Posa per la posa di mattonelle e piastrelle in cemento e ceramica

1) ES WERDEN KEINE BEANSTANDUNGEN AKZEPTIERT, NACHDEM DAS MATERIAL BEREITS VERLEGT WURDE.
2) ÜBERPRÜFEN SIE DEN FARBTON, DAS WERKMASS, DIE SORTIERUNG UND DIE EBENFLÄCHIGKEIT, BEVOR SIE DIE FLIESEN VERLEGEN.
3) DIE ELEKTRONISCHEN MASCHINEN, DIE DAS WERKMASS BESTIMMEN, SIND AUF EINE TOLERANZ VON 1,2 MM EINGESTELLT.
4) DIE FLIESEN MÜSSEN MIT EINER FUGENBREITE VON MINDESTENS 3 MM VERLEGT WERDEN.
REKTIFIZIERTE FLIESEN MÜSSEN MIT EINER FUGENBREITE VON MINDESTENS 2 MM VERLEGT WERDEN.
Die Serien Campigiane müssen mit einer Fugenbreite von 5 mm verlegt werden.

Consigli di Posa per la posa di mattonelle e piastrelle in cemento e ceramica

Vor der Verlegung empfehlen wir eine Kontrolle über Ton, Kaliber und Sortierung vorzunehmen. Unser Material wird absichtlich mit leichten Nuance Unterschieden produziert, welche die Wirkung der Farben und Muster bekräftigen. Es ist ferner notwendig, während der Verlegung, Fliesen aus verschiedenen Kartons zu verwenden. Die Annahme der Ware und schliesst jede Beanstandung aus. Beanstandungen von schon verlegte Ware werden nicht angenommen.

Consigli di Posa per la posa di mattonelle e piastrelle in cemento e ceramica

Um die Eigenschaften des Produkts während der Verlegung voll zur Geltung zu bringen, ist als Erstes eine abwechslungsreiche Anordnung der Farbtöne empfohlen, wofür die Fliesen in Gruppen von jeweils 3-4 Stück von wenigstens fünf Schachteln zu entnehmen sind. Die verschiedenen Farbtöne sind dann zusammenpassend zu verteilen, wobei man sich das Ergebnis ab und zu von einer gewissen Entfernung ansehen sollte.

Verlegung geschliffener Fliesen

Bei der Verlegung von geschliffenen Fliesen ist es jedenfalls ratsam, eine Fuge von mindestens 2/3 mm vorzusehen und Fugen- und Dichtmassen mit einer solchen Färbung zu verwenden, die zu den Farbtönen der Fliesen passt. Bei der Verlegung von rechteckig geschliffenen Fliesen ist infolge der auf sämtlichen großen Formaten vorhandenen Ebenheitsfehler darauf zu achten, dass die oberen Ränder einer Fliese nicht mit der Mitte der anderen Fliesen zusammentreffen. Da es sich um geschnittenes und geschliffenes Material handelt, kann dieses Problem dadurch gelöst werden, dass man die Fliesen fortlaufend, mit einem Zwischenraum von 0 bis 15 cm verlegt. Es ist absolut empfehlenswert, dass die Verlegung von Fachpersonal mit der nötigen Erfahrung ausgeführt wird, das nach der Überprüfung des Estrichs auf einwandfreie Ebenheit und der Qualität des Materials die ihm anvertraute Arbeit anstandslos ausführen wird.

Grundreinigung nach der Verlegung

Die Grundreinigung nach der Verlegung ist grundlegend, um die spätere Reinigung und Pflege zu ermöglichen. Mit der Grundreinigung nach der Verlegung werden:
- bei der Verlegung selbst entstandene Rückstände (Mörtel, Kleber, Lack, Baustellenschmutz verschiedener Art)
- und eventuelle oberflächliche Materialrückstände entfernt.

Man sollte wissen, dass mehr als 90% der Beanstandungen auf der Baustelle darauf zurückgehen, dass keine oder eine unzureichende Grundreinigung nach der Verlegung erfolgt ist.

Wasserrückfluss bei Verlegung auf Hohlraumböden:

Es wird empfohlen, dem Fußboden ein Gefälle von mindestens 1% zu geben.

Es wird zur Verwendung von Metallklammen geraten, die zwischen den einzelnen Platten eingefügt werden, um die Oberflächenspannung des Wassers bei Ansammlungen zu brechen und so den Rückfluss zu verbessern.

Stets wird geraten, eine mittlere Halterung pro Fliese des Bodenbelags zu verwenden.

Consigli per la stuccatura e la Pulizia dopo la posa

Eseguire una precisa e corretta pulizia del prodotto ceramico è di fondamentale importanza per mantenerne nel tempo l'originaria lucentezza e bellezza. Si raccomanda pertanto di seguire con attenzione le indicazioni seguenti.

A) PULIZIA “DOPO-POSA” IN CANTIERE

Il lavaggio iniziale delle piastrelle nel “dopo-posa” in cantiere è una fase di fondamentale importanza.

È infatti in questo momento che è possibile rimuovere agevolmente dalle piastrelle tutti i residui dei materiali usati per la posa e/o della stuccatura delle fughe della piastrella stessa.

Si tratta di residui di varia natura che, se lasciati "asciugare e/o seccare" sulle piastrelle, soprattutto in quelle caratterizzate da una superficie strutturata più o meno accentuata potrebbero diventare difficili da rimuovere successivamente. Si raccomanda sempre la massima attenzione alla scelta dell'agente pulente per non alterare irrimediabilmente il grado di lucentezza e brillantezza della piastrella posata.

Pulizia del pavimento stuccato con “Stucchi cementizi a base d'acqua”

Come già accennato, con il lavaggio “dopo-posa” si rimuovono i residui di cemento, stucchi cementizi, salnitri, colle ed eventuali residui superficiali del materiale di varia natura. In questa fase il pavimento deve essere lavato con detersigenti a base di acidi tamponati entro almeno 3-4 giorni dopo la posa e mai oltre i 10 giorni.

NB: Per i prodotti caratterizzati da superfici strutturate e/o antiscivolo si raccomanda, viste le asperità della struttura, di sporcare il meno possibile la superficie della piastrella durante le fasi della posa e di pulire bene subito dopo la stuccatura gli eccessi di materiali utilizzati con una spugna bagnata in acqua pulita. Si raccomanda altresì di eseguire la procedura sotto-descritta il prima possibile e comunque prima dei su citati 3-4 giorni massimi dal “dopo-posa”.

Procedere come segue:

- Preparare il detersigente come indicato in etichetta (si consiglia di effettuare prove preliminari su piastrelle non posate per verificare l'inalterabilità della superficie della piastrella)
- Bagnare preventivamente il pavimento con acqua pulita
- Stendere la soluzione sulle piastrelle lasciando che agisca per qualche minuto
- Passare la monospazzola utilizzando dischi appropriati (verdi per le superfici strutturate e rosso per le non strutturate) o una paglietta (verde per le superfici strutturate e rossa/marrone per le non strutturate) strofinando energicamente la superficie delle piastrelle.
- Risciacquare abbondantemente con acqua pulita aspirando il liquido

PULIZIA FINE CANTIERE STUCCO CEMENTIZIO	TIPO DI DETERGENTE	PRODOTTO	PRODUTTORE
	Detersigente acido	CEMENT REMOVER	FABER CHIMICA
		KERANET	MAPEI
		DETERDEK	FILA

Pulizia del pavimento stuccato con “Stucchi epossidici”

Nel caso di utilizzo di stucchi epossidici, considerato che essi induriscono rapidamente in pochi minuti, il lavaggio “dopo-posa” deve essere eseguito con **detersigenti alcalini** il più rapidamente possibile attenendosi scrupolosamente alle indicazioni e procedure d'utilizzo indicati in etichetta.

Procedere come segue:

- Preparare il detersigente come indicato in etichetta (si consiglia di effettuare prove preliminari su piastrelle non posate per verificare l'inalterabilità della superficie della piastrella)
- Bagnare preventivamente il pavimento con acqua pulita
- Stendere la soluzione sulle piastrelle lasciando che agisca per qualche minuto
- Passare la monospazzola utilizzando dischi appropriati (verdi per le superfici strutturate e rosso per le non strutturate) o una paglietta (verde per le superfici strutturate e rossa/marrone per le non strutturate) strofinando energicamente la superficie delle piastrelle.
- Risciacquare abbondantemente con acqua pulita aspirando il liquido

PULIZIA FINE CANTIERE STUCCO EPOSSIDICO	TIPO DI DETERGENTE	PRODOTTO	PRODUTTORE
	Detersigente alcalino	EPOXY REMOVER	FABER CHIMICA
		FILA CR	10 FILA

B) PULIZIA QUOTIDIANA

La pulizia ordinaria può essere fatta con l’ausilio di normali detersigenti neutri adatti alla pulizia delle superfici ceramiche, eventualmente diluendoli in acqua calda per aumentarne l’efficacia, attenendosi alle istruzioni in etichetta del produttore.

To maintain the original shine and beauty of your tiles after fixing, the correct cleaning procedures must be followed.

Immediate action after laying and grouting:

Cleaning the tiles immediately after the initial fixing and, again after the grouting, is very important. At this point thoroughly wash the surface and joints of the tile with clean water several times. This will ensure any residual adhesive or grout will not set on the surface of the tile causing cleaning difficulties later. This is particularly important when fixing tiles with a structured or non slip surface. When grouting tiles with a structured surface it is advisable to ensure grout does not get spread across the whole surface of the tile.

Secondary Cleaning:

Whilst thorough washing with clean water will remove residual adhesive and grout from the surface of the tile a proprietary acid based cleaning agent should be applied within 2-3 days of laying to completely clean the surface of the tile. When using secondary cleaning agents it is advisable to “test” the product on a loose tile first to ensure the surface shine and brilliance of the tile is not affected.Recommended Secondary Cleaning Detergents For Water Based Adhesive and Grout:

CLEANING CEMENT-BASED GROUT AFTER INSTALLATION	TYPE OF DETERGENT	PRODUCT	MANUFACTURER
	Acid detergent	CEMENT REMOVER	FABER CHIMICA
		KERANET	MAPEI
		DETERDEK	FILA

ALWAYS FOLLOW THE MANUFACTURES INSTRUCTIONS.

Recommended secondary Cleaning for Epoxy Grouted Floors:

When using epoxy grouts it is important to remember they harden much more quickly than conventional water based cement grouts. It is therefore necessary to carry out the cleaning procedures immediately using an alkaline detergent.

CLEANING EPOXY-BASED GROUT AFTER INSTALLATION	TYPE OF DETERGENT	PRODUCT	MANUFACTURER
	Alkaline detergent	EPOXY REMOVER	FABER CHIMICA
		FILA CR	10 FILA

ALWAYS FOLLOW THE MANUFACTURERS INSTRUCTIONS.

Everyday Cleaning and Maintenance:

For day to day general cleaning you should use any normal neutral detergent suitable for the cleaning of ceramic or porcelain tiles. Dilute with warm water and always follow the instructions on the product label.

Un nettoyage minutieux et correct du produit en céramique est fondamental pour en préserver le brillant et la beauté d'origine. Il est donc recommandé de suivre avec attention les indications suivantes

A) NETTOYAGE “APRÈS LA POSE” SUR LE CHANTIER

Le lavage initial des carreaux au cours de la phase “après la pose” sur le chantier est une étape extrêmement importante.

En effet, c’est à ce moment-là qu’il est possible d’éliminer facilement des carreaux tous les résidus du matériel utilisé pour la pose et/ou du jointage des joints.

Il s’agit de résidus de différente nature qui pourraient s’avérer difficiles à éliminer par la suite, si on les laisse “sécher et/ou durcir” sur les carreaux, surtout s’ils sont caractérisés par une surface structurée plus ou moins accentuée. On recommande toujours de choisir le produit de nettoyage avec la plus grande attention pour ne pas altérer irrémédiablement le degré de luisance et de brillance du carreau posé.

Nettoyage des carrelages jointes avec des “Mastics à base de ciment et d'eau”

Comme on l’a dit, le lavage “après la pose” permet d’éliminer les résidus de béton, les mastics à base de ciments, les nitrates de potassium, les colles et les éventuels résidus superficiels de différente nature. Au cours de cette phase, le carrelage doit être lavé avec des détergents à base d’acides tamponnés au moins 3-4 jours après la pose et au maximum dans les 10 jours.

N.B.: Pour les produits caractérisés par des surfaces structurées et/ou antidérapantes, il est recommandé, vu les aspérités de la structure, de salir le moins possible la surface du carreau au cours de la pose et de bien éliminer les excès de produit utilisé immédiatement après le jointage avec une éponge imbibée d’eau propre. Il est également recommandé d’exécuter la procédure décrite ci-dessous dès que possible et au plus tard avant la période maximale de 3-4 jours indiquée plus haut à compter de l’“après-pose”.

Procéder comme suit:

- Préparer le détergent d’après les indications figurant sur l’étiquette (il est recommandé d’effectuer des essais préliminaires sur des carreaux non posés pour vérifier l’inaltérabilité de la surface des carreaux)
- Mouiller préalablement le carrelage avec de l’eau propre
- Étaler la solution sur les carreaux en laissant agir quelques minutes
- Passer la monobrosse en utilisant les disques appropriés (verts pour les surfaces structurées et rouges pour les surfaces non structurées) ou une paille de fer (verte pour les surfaces structurées et rouge/marron pour les surfaces non structurées) en frottant énergiquement la surface des carreaux.
- Rincer abondamment à l’eau propre en aspirant le liquide

NETTOYAGE FIN DE CHANTIER MORTIER À BASE DE CIMENT	TYPE DE DÉTERGENT	PRODUIT	FABRICANT
	Détergent acide	CEMENT REMOVER	FABER CHIMICA
		KERANET	MAPEI
		DETERDEK	FILA

Nettoyage des carrelages jointes avec des “Mastics époxy”

Si l’on utilise des mastics époxy, vu qu’ils durcissent rapidement en quelques minutes, le lavage “après la pose” doit être effectué avec des **détersigents alcalins** dans les plus brefs délais en suivant scrupuleusement les indications et les procédures d’utilisation figurant sur l’étiquette.

Procéder comme suit:

- Préparer le détergent d’après les indications figurant sur l’étiquette (il est recommandé d’effectuer des essais préliminaires sur des carreaux non posés pour vérifier l’inaltérabilité de la surface des carreaux)
- Mouiller préalablement le carrelage avec de l’eau propre
- Étaler la solution sur les carreaux en laissant agir quelques minutes
- Passer la monobrosse en utilisant les disques appropriés (verts pour les surfaces structurées et rouges pour les surfaces non structurées) ou une paille de fer (verte pour les surfaces structurées et rouge/marron pour les surfaces non structurées) en frottant énergiquement la surface des carreaux.
- Rincer abondamment à l’eau propre en aspirant le liquide

NETTOYAGE FIN DE CHANTIER MORTIER ÉPOXY	TYPE DE DÉTERGENT	PRODUIT	FABRICANT
	Détergent alcalin	EPOXY REMOVER	FABER CHIMICA
		FILA CR	10 FILA

B) NETTOYAGE QUOTIDIEN

Le nettoyage quotidien peut être réalisé à l’aide de détergents neutres normaux indiqués pour le nettoyage des surfaces en céramique, éventuellement en les diluant dans de l’eau chaude pour en augmenter l’efficacité, en suivant les instructions du producteur sur l’étiquette.

Die richtige Reinigung der Keramik Erzeugnisse ist äußerst wichtig, damit sie lange schön bleiben und ihre ursprüngliche Optik bewahrt wird. Daher empfehlen wir folgende Vorgehensweise:

A) REINIGUNG NACH DER VERLEGUNG/ERSTREINIGUNG ODER BAUENDREINIGUNG.

Die erste Reinigung der Fliesen nach der Verlegung ist von wesentlicher Bedeutung

Zu diesem Zeitpunkt ist es noch möglich, sämtliche Materialreste der Verlege- und/oder Verlegungsarbeiten mühelos von den Fliesen zu entfernen. Lässt man diese Überreste verschiedener Art auf den Fliesen eintrocknen, so kann es sein, das diese sich vor allem bei einer stärker strukturierten Oberfläche, zu einem späteren Zeitpunkt nur noch sehr schwer beseitigen lassen. Auch das Reinigungsmittel sollte mit größter Sorgfalt ausgewählt werden, um zu vermeiden, dass die strahlende Optik der verlegten Fliesen nicht unwiederbringlich verloren geht.

Reinigung von Fußböden, die mit, Zementfugenmörtel auf Wasserbasis“ verfuft sind

Wie bereits erwähnt, werden bei der Erstreinigung nach der Verlegung sämtliche Reste an Zement, Zementfugenmasse, Salpeter und Klebstoffen entfernt, ebenso wie eventuelle oberflächliche Materialreste verschiedener Art. Der Boden sollte innerhalb von 3-4 Tagen, jedoch spätestens 10 Tage nach der Verlegung mit einem schonenden und handelsüblichen Bauendreiniger gereinigt werden. Für empfindliche Oberflächen kann auch ein schonender Bauendreiniger für Marmor eingesetzt werden. Hier kann keine Verletzung der Oberfläche eintreten. Informieren Sie sich im Fachhandel und beachten Sie die Herstellerangaben.

Hinweis: Bei den Erzeugnissen mit strukturierter und/oder rutschfester Oberfläche wird aufgrund der rauen Struktur empfohlen, die Oberfläche während der Verlegung so wenig wie möglich zu beschmutzen und das überschüssige Material nach den Verlegungsarbeiten sofort mit einem in sauberem Wasser getränkten Schwamm zu reinigen. Außerdem sollten die unten beschriebenen Arbeiten so früh wie möglich und in jedem Fall vor der oben genannten Frist von 3-4 Tagen nach der Verlegung durchgeführt werden.

Folgende Vorgehensweise empfehlen wir:

- Das Reinigungsmittel gemäß den Hinweisen auf dem Etikett verarbeiten (es wird empfohlen, vorher Proben an nicht verlegten Fliesen durchzuführen, um sicherzustellen, ob die Oberfläche nicht verändert wird).
- Der Belag wird mit klarem Wasser vorgehässt.
- Das Reinigungsmittel wird auf den Belag aufgebracht. Beachten Sie die Herstellerangaben für die Einwirkzeit. Bei zu langen Einwirkzeiten können Verätzungen auftreten.
- Je nach Oberflächenstruktur können Sie zur manuellen Unterstützung, Bürsten oder Pads verwenden. Das gleiche gilt auch im Einsatz mit Reinigungsautomaten oder Einseinßenmaschinen. Aber bitte Vorsicht! Achten Sie auf die Härtegrade der Pads. Ihr Fachhändler wird Sie hinreichend aufklären. Zu harte Pads können die Oberfläche schädigen. Weichere Bürsten oder weiße/weiche Pads sind daher immer eine gute Wahl.
- Die Schmutzbrühe anschließend aufnehmen und gründlich mit klarem Wasser nachwaschen.

REINIGUNG BEI BAUSTELLE-NENDE ZEMENTSTUCK	ART DES REINIGUNGSMITTELS	PRODUKT	HERSTELLER
	Saurer Reinigungsmittel	CEMENT REMOVER	FABER CHIMICA
		KERANET	MAPEI
		DETERDEK	FILA

Reinigung von Fußböden, die mit „Epoxidfugenmörtele“ verfuft sind:

Bei der Verwendung von Epoxidfugenmörtel, der bereits innerhalb weniger Minuten hart wird, muss die Erstreinigung schnellstmöglich nach der Verlegung mit geeigneten Reinigungsmitteln erfolgen, wobei die auf dem Etikett genannten Hinweise und Anwendungsverfahren unbedingt befolgt werden sollten.

REINIGUNG BEI BAUSTELLE-NENDE EPOXY STUCK	ART DES REINIGUNGSMITTELS	PRODUKT	HERSTELLER
	Alkalines Reinigungsmittel	EPOXY REMOVER	FABER CHIMICA
		FILA CR	10 FILA

B) TÄGLICHE REINIGUNG/UNTERHALTSREINIGUNG

Für die Unterhaltsreinigung empfehlen wir handelsübliche Feinstenzugreiniger. Informieren Sie sich im Fachhandel und beachten Sie die Herstellerangaben.
